PROFESSIONAL SUMMARY

DevOps-focused MCA graduate (2025, CGPA 9.05) with project-based hands-on experience in Docker, Kubernetes, Jenkins CI/CD, Prometheus/Grafana monitoring, and Terraform on AWS. Designed, deployed, and monitored a full-stack web application from containerization to cloud infrastructure. Seeking a DevOps Engineer role to build reliable, automated delivery pipelines.

TECHNICAL SKILLS

Containers & Kubernetes: Docker, Docker Compose, Kubernetes (kubeadm, kubectl), AWS EKS

CI/CD & IaC: Jenkins, Kaniko, Terraform, Git, GitHub

Cloud (AWS): EC2, EKS, ECR, RDS, ElastiCache, S3, VPC, IAM

Monitoring & Security: Prometheus, Grafana, HashiCorp Vault, TLS (cert-manager)

Systems & Basics: Linux (Ubuntu), Bash, Python, Nginx, TCP/IP, DNS, HTTP/HTTPS

PROJECTS

CampusCart — Kubernetes Deployment on Self-Built Cluster (kubeadm)
Tech: *Django, Docker, Kubernetes, Jenkins, Nginx, PostgreSQL, Redis, Vault, Prometheus, Grafana* | *campuscart.bharathops.online*

- Built a **3-node Kubernetes cluster from scratch with kubeadm** on virtual machines and deployed a Django web app with Nginx, PostgreSQL and Redis; the app is live on the internet.
- Containerised the Django backend with a **multi-stage Docker build** that runs as a **non-root user**.
- Created a **Jenkins CI/CD pipeline** that tests, scans (bandit, pip-audit), builds images with **Kaniko**, runs database migrations and deploys to Kubernetes, with **automatic rollback** if a deployment fails.
- Gave Jenkins **limited RBAC permissions** (namespace-scoped) and stored passwords in **HashiCorp Vault** instead of in images or Git.
- Set up **internal TLS with cert-manager and a private CA**, public access through a **Cloudflare Tunnel**, **Prometheus and Grafana** monitoring, and a nightly **PostgreSQL backup** job.

E-commerce Application — Deployment on AWS EKS (completed, infrastructure torn down)
Tech: *Docker, Kubernetes, Terraform, Jenkins, Kaniko, AWS (EKS, ECR, VPC, IAM, RDS, ElastiCache)* | *github.com/bharathMoger18/k8s-campuscart*

- Provisioned AWS infrastructure — **VPC, EKS cluster, RDS, ElastiCache and IAM roles** — as modular, version-controlled **Terraform** code for repeatable environment setup.
- Built a **Jenkins pipeline** with a **manual approval gate** between Terraform plan and apply, automating infrastructure changes alongside application deployment.
- Replaced in-cluster stateful workloads with managed AWS services (**RDS, ElastiCache**) and configured **IRSA** roles for External Secrets and the AWS Load Balancer Controller.
- Deployed the application behind an **AWS Application Load Balancer** with path-based routing, and configured a **HorizontalPodAutoscaler** (2 to 6 replicas).
- Automated image builds and pushes to **Amazon ECR** using **Kaniko**, deploying manifests templated from live Terraform outputs.

FREELANCE EXPERIENCE

Freelance Web Developer | January 2026 – March 2026
Built three web applications as paid projects, using AI-assisted development.

- **CampusCart:** Django e-commerce app with Stripe payments (deployment shown under Projects).
- **SecureCloud:** Django REST file-storage app with JWT login and MFA. GitHub
- **VTU Navigator Bot:** React and Django campus assistant. GitHub

EDUCATION

Master of Computer Applications (MCA) — Visvesvaraya Technological University, Mysuru
2025 (Passout) | CGPA: 9.05/10

Bachelor of Computer Applications (BCA) — Shree Guru Sudhindra BCA College, Bhatkal
2023 (Passout) | CGPA: 8.1/10
